# **SITUATION SUMMARY**

## **California Department of Public Health Zika Virus Disease Update**

The Medical and Health Coordination Center (MHCC) continues to be activated in response to the Zika Virus Disease (Zika) in order to aggregate and update information from a variety of sources and coordinate response activities across the California Department of Public Health (CDPH).

- CDPH centers and programs are providing information related to their specific activities on a weekly basis. This information is being collected and included in a weekly Public Health and Medical Emergency Function (EF) 08 Situation Report released by the MHCC. The MHCC is managing requests for information from the public, healthcare facilities, and Local Health Departments (LHDs) to ensure responses are timely and accurate.
- Zika is transmitted to people primarily through the bite of an infected *Aedes Aegyptus* mosquito (also known as yellow fever mosquitoes) and *Aedes Albopictus* mosquito (also known as Asian tiger mosquitoes), which are not native to California. Today, more than 60 countries have documented Zika Virus transmission, with over 40 reporting their first outbreak within recent months. The most common symptoms of Zika Virus are fever, rash, joint pain, and conjunctivitis (red eyes). The illness is usually mild with symptoms lasting for several days to a week after being bitten by an infected mosquito. People do not consistently get sick enough to go to a hospital, and rarely die from Zika Virus. For this reason, many people might not realize they have been infected. However, Zika Virus infection during pregnancy can cause a serious birth defect called microcephaly, as well as other severe fetal brain defects.
- The Centers for Disease Control and Prevention, (CDC), CDPH, Emergency Medical Services Authority (EMSA), California Governor's Office of Emergency Services (Cal OES), State level EF 08 partners, are preparing for the management of Zika cases in California. Reporting of select notifiable diseases is mandated by State law in California through *Title 17 California Code of Regulations* and Zika Virus is now a notifiable disease that must be reported.
- CDPH is working with the healthcare community and local health jurisdictions to identify potential suspect cases and avoid spread of the disease.
- New and updated guidelines released by CDC are posted on the CDPH website available at: (<http://www.cdph.ca.gov/HealthInfo/discond/Pages/Zika.aspx>)
- CDPH and local health jurisdictions are monitoring the situation closely to keep the public safe.
- EMSA and the EMSA Duty Officer Program are monitoring the situation to remain in communication with the Regional Disaster Medical Health Specialists (RDMHS) and Medical Health Operational Area Coordinator (MHOAC) Programs.
- Please see attached for full report.

## **California Department of Public Health Heat Event Executive Summary**

- The MHCC is activated in response to forecasts of excessive heat for this week, especially in Southern California.
- CDPH is collecting and monitoring Heat Event impacts to Licensing and Certification (L&C) regulated health care facilities, skilled nursing facilities, intermediate care facilities and local cooling centers, and distributing the information to the appropriate EF-08 Partners.
- EMSA is maintaining contact with Cal OES, CDPH, and RDMHS to monitor excessive heat issues related to medical/health issues.

# WEATHER OF CONCERN

## Weather of Concern

- A red flag warning is in effect this evening through late Friday night for the mountains of Los Angeles, Ventura and Santa Barbara counties.

## **Active Weather Warnings, Watches and Advisories by County:**

[http://www.wrh.noaa.gov/sto/brief/wwa\\_bc\\_cal.php](http://www.wrh.noaa.gov/sto/brief/wwa_bc_cal.php)

# WEATHER SYNOPSIS BY REGION

## **NORTHERN CALIFORNIA**

A low off the Vancouver Island is on the move toward the Pacific Northwest today and will exit to the northeast Friday. Much cooler temperatures will be in place for North Ops today and Friday as a result. There is a small chance of some afternoon and evening thunderstorms along the Oregon border today, mostly in Siskiyou County. The incoming low will generate some moderate S to SW winds for areas east of the Cascade/Sierra crest today with afternoon wind speeds reaching 15-25 mph with gusts to around 35 mph and low humidity 8-14%. No high risk criteria issuance is planned for that area at this time, although conditions will approach that.

High pressure arriving right behind the low Friday will help generate some moderately strong, gusty north winds for the Sacramento Valley area in particular. Daytime wind speeds will likely reach up to 10-15 mph in some areas with gusts to around 25 mph. The western portion of the Valley will have the strongest winds. The strongest winds won't last long in most areas, however.

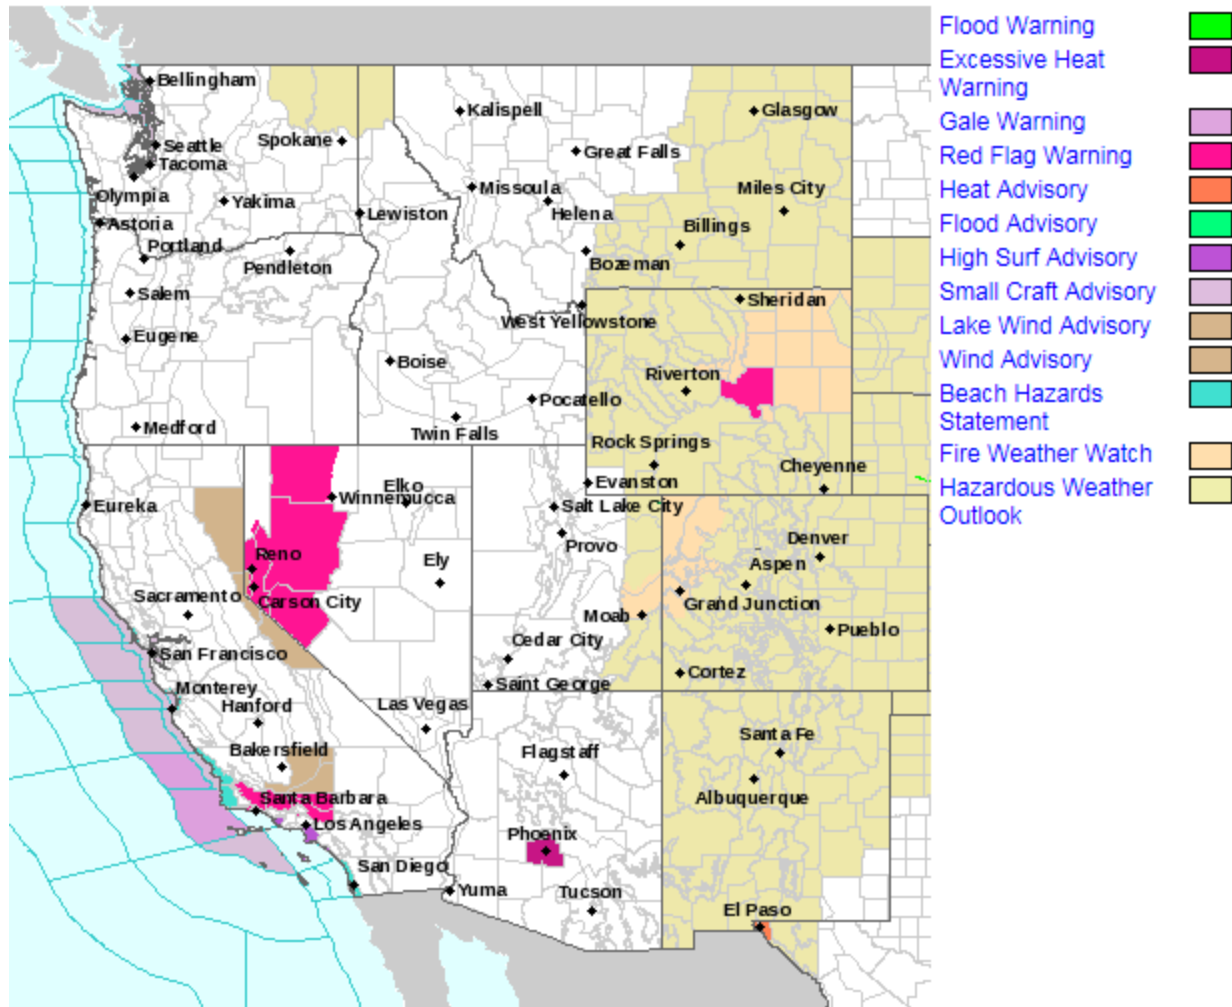

High pressure in some form will keep most of North Ops very warm and dry well into next week. Afternoon highs in the warmest inland areas will range from about 100-105 most days. Reasonably widespread afternoon min RH of 8-18% is expected. There will be many areas with poor to moderate RH recovery as well (less than 40%).

## **SOUTHERN CALIFORNIA**

A storm system will move into the Pacific Northwest today and will be in the Northern Rockies by Friday afternoon. This storm will help lower temperatures today by a couple of degrees with daytime highs in the 90s across the inland valleys and in the 70s and 80s in the mountains. Minimum humidity this afternoon will drop into the single digits and teens across parts of the central coast as well as over most desert locations. Elsewhere humidity values will be in the 20-35% range with some teens in the mountains. It will be windy across the desert passes this afternoon and evening, especially over the Tehachapi Range where west to northwest sustained winds of 20 to 35 mph will occur. As the storm in the Pacific Northwest moves east, surface pressure gradients will turn more northerly which will set the stage for a round of strong northwest to north winds across the mountains of Santa Barbara, Ventura, and Los Angeles Counties tonight through Saturday. The strongest winds will be Friday evening into Saturday morning with speeds in the 20 to 35 mph range. These winds will be accompanied by low humidity and warm overnight low temperatures. It will be a few degrees warmer Friday and Saturday, especially over the southern half of the state. High pressure over the Desert Southwest will build westward into California Sunday and into early next week with the inland areas climbing above the century mark once again. The surface flow will become weakly onshore with light southwest to northwest winds over the area during this time. A southerly flow aloft will develop over the region during the latter half of next week which may allow for enough moisture to be transported into the area for a chance of thunderstorms over the mountains and deserts starting Wednesday.
